

Table S. Patient's Naranjo Adverse Reaction Probability Scale

Question	Yes	No	Do Not Know	Score
Are there previous <i>conclusive</i> reports of this reaction?	1	0	0	1
Did the adverse event appear after the suspected drug was administered?	2	0	0	2
Did the adverse reaction improve when the drug was discontinued or a <i>specific antagonist</i> was administered?	1	0	0	1
Did the adverse reaction reappear when the drug was readministered?	2	-1	0	0
Are there alternative causes (other than the drug) that could on their own have caused the reaction?	-1	2	0	2
Did the reaction reappear when a placebo was given?	-1	1	0	0
Was the drug detected in the blood (or other fluids) in concentration known to be toxic?	1	0	0	0
Was the reaction more severe when the dose was increased, or less severe when the dose was decreased?	1	0	0	0
Did the patient have a similar reaction to the same or similar drugs in any previous exposure?	1	0	0	0
Was the adverse event confirmed by any objective evidence?	1	0	0	1
Total Score*				7

* A score of 7 suggests that the adverse reaction is probably due to clobazam.
